

# Company fact sheet

## Company profile

For over 60 years VELUX have been the leading manufacturer of roof windows in the UK, filling millions of homes with daylight and fresh air. During this time, we have developed a huge range of products that ensure a healthy indoor climate for work and pleasure.

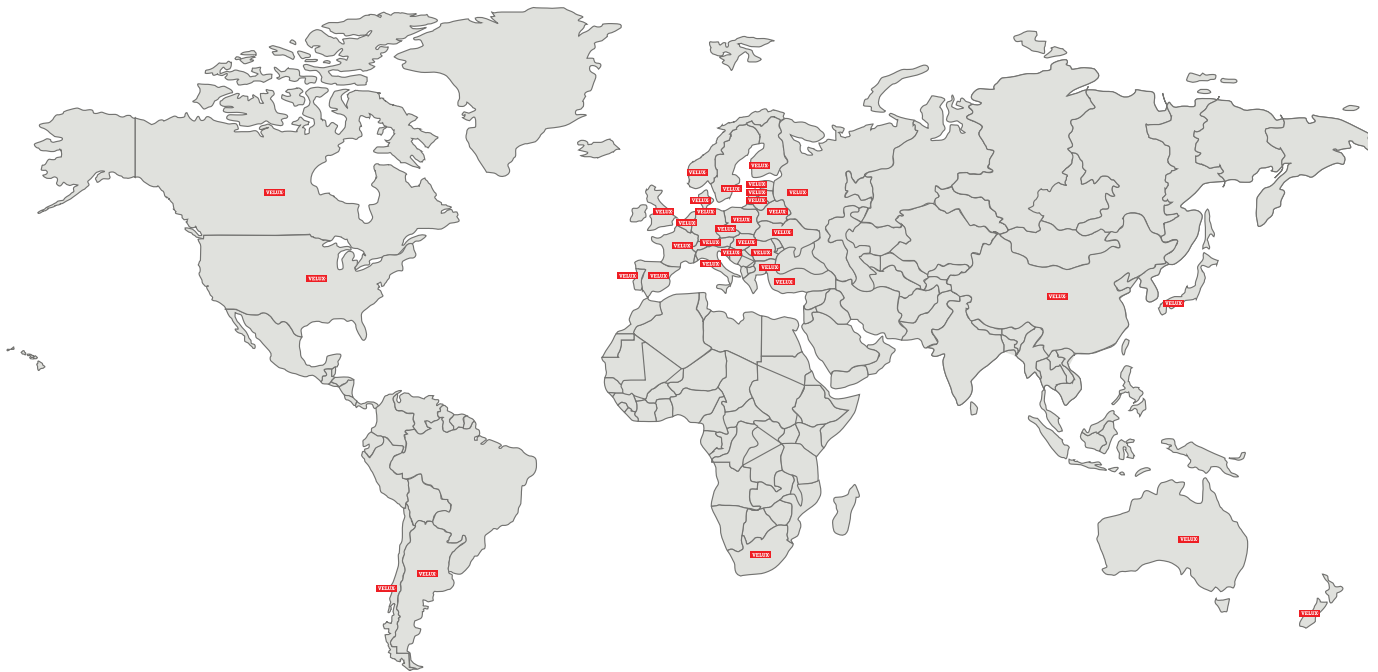

At VELUX®, we have always understood the impact that natural light can bring to our homes and workplaces. VELUX roof windows can help maximize the quantity and quality of natural light and ventilation that buildings receive, taking projects to the next level.

## VELUX in brief

The VELUX Group offers an extensive number of products and services around the world.

### Product overview

- Modular skylights for commercial buildings
- Flat-roof windows and sun tunnels
- Blinds and roller shutters

- Ron Hogg, Operations Director

### We spend 90 % of our lives inside buildings

40% of society's total energy consumption is accounted for by buildings.

15% is the potential increase in children's learning ability if they are in a good indoor climate.

By 2050 9 out of 10 of the buildings in Europe (2015) will still be in use.

### Future solutions are here today

### 10 years of discoveries through full-scale buildings

12 Countries 21 Active Houses

### Model Home 2020 proof of concept

**1 Hour** less artificial lighting. No use of electric light between sun rise and sun set all year.

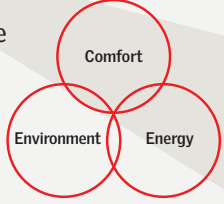

**5%** or higher daylight factor in main rooms without overheating.

**Good** indoor air quality achieved with natural ventilation during summer.

### 2020 building targets can be reached with today's products

Society is in need of energy-efficient buildings that provide a healthy indoor climate for people living, working or playing inside them, while having minimal impact on the environment.

Active House Principles are key

»Healthwise while we've been here we haven't had the colds and the coughs we'd usually have before. I think it has to do with the air quality and the daylight.«  
**Glazebrook Family, UK**

»Within the last two years no one of us was ever really sick. Normally everyone has at least once in a year is seriously ill.«  
**Oldendorf Family, Germany**

»Ryan [the son] still hasn't had an asthma attack«  
**Pastour Family, France**

## Our History

In 1941, entrepreneur and inventor Villum Kann Rasmussen came up with an idea that would transform dark attics into liveable spaces full of daylight and fresh air. His first roof window was patented in 1942. He came up with a distinctive name that brought out the key benefits of his solution: 'VE' short for ventilation and 'LUX' latin for light. VELUX.
